

# Atypical Myopathy

**Sadly, it was too late for Millie.  
Make sure you know the signs.**

They may include:

- Muscle stiffness
- Reluctance to walk
- Sweating
- Depression and/or looking sedated
- Signs of colic
- High heart rate and difficulty breathing
- Dark urine
- Weakness, difficulty standing
- The horse may still want to eat

**Symptoms develop rapidly, contact a vet if you are concerned.**

For more information on causes, visit: [Atypical Myopathy](#)
